

## Ordering Information:

Rogers' high frequency laminates can be purchased by contacting a Rogers Customer Service Representative at (480) 961-1382 or one of our international offices listed below.

To ensure that you receive the material for your application, please include order information for each of the categories listed below. For more detailed product information, refer to the charts in this product selector guide.

### GRADE:

**Laminates** - RT/duroid® 5870, 5880, 6002, 6202, 6006, 6010LM, ULTRALAM® 2000, ULTRALAM 3000, TMM® 3,4,6,10, and 10i, RO3003™, RO3035™, RO3203™, RO3006™, RO3206™, RO3010™, RO3210™, RO4003C™, and RO4350B™ high frequency laminates.

**Bonding Film** -3001 Prepreg - RO4403™, RO4450B™ and RO4450F™

### THICKNESS AND TOLERANCE:

Laminate thickness is normally specified as the dielectric thickness without copper cladding. Custom tolerances are available on RT/duroid laminates upon request.

### TYPE OF FOIL CLADDING:

¼, ½, 1, 2 oz. electrodeposited copper foil, ½, 1, 2 oz. rolled copper foil. TMM, RO3000 and RO4000 series laminates are not supplied with ¼ oz. electrodeposited or rolled copper foil.

Some material grades may be supplied unclad. Call Rogers Customer Service Representatives for unclad options.

Thick aluminum, copper and brass claddings are available on Rogers RT/duroid laminates. Thick aluminum and brass claddings are available on most TMM laminates. Thick metal cladding is not available on RO4000 laminates. Thick aluminum, copper, and brass claddings are also available in a range of thicknesses and thickness tolerances. Other thick metal backings are available upon request.

### SPECIFICATION REQUIREMENTS:

Standard specifications are Rogers' material specifications. Certificates of conformance are available.

All other requirements must be identified at the time the order is placed. If special testing or data generation is required, additional costs may be incurred.

**Properties Notes: \*Estimated, \*\* Preliminary Data**

- 1) Measured by IPC-TM-650 method 2.5.5.5 @ -10 GHz, 23°C. RT/duroid 6010 materials were based on testing a 0.025" thick sheet, clad with 1 oz. electrodeposited copper foil.  $\epsilon_r$  values and tolerance reported by IPC-TM-650 method 2.5.5.5 are the basis for quality acceptance, but for some products these values may be incorrect for design engineering applications, especially those in microstrip. We recommend that prototype boards of a new design be verified for electrical performance.
- 2) Measured by IPC-TM-650 method 2.5.5.5 at -10GHz modified.
- 3) Young's modulus (elastic modulus), steepest region of the stress/strain curve is in tension for X and Y axes by ASTM D 638: in compression of Z axis by ASTM D695 on 12.7 X 12.7 X 25.4 mm stocked specimen.
- 4) Testing conditions: 24 hours @ 23°C, specimens etched free of copper.
- 5) Tested by ASTM C518.
- 6) Tested by ASTM D3386-94. Values are average over temperature range but not necessarily linear. However for RT/duroid 6002 and TMM grades the response is essentially linear.
- 7) The nominal dielectric constant of an 0.060" thick RO3003/RO3203 as measured by IPC-TM-2.5.5.5 will be 3.04 due to the elimination of biasing caused by air gaps in the test fixture. For further information refer to Rogers T.R. 5242.
- 8) Dielectric constant typical value does not apply to 0.004 (0.101mm) laminates. Dielectric constant specification value of 0.004" RO4350B materials is 3.36 ± 0.05.
- 9) Due to construction limitations, the dielectric constant of 0.010" and 0.015" thick laminates is 3.02 ± 0.04" .

Typical values are a representation of an average value for the population of the property. For specification values contact Rogers Corporation.
